The unit consists of two measurement circuits with an open circuit test voltage of 20 V for wrist strap and shoe test applications. The desired maximum allowable resistance level can be selected separately for each measurement. Note If you notice a delay in the response time of the LED illumination please connect the ground cord supplied to the ground socket of the 740. Please ensure proper earth ground connection. Switch the unit on. All LEDs will flash for approximately 1 s to check their function. Select the desired upper maximum resistance level for both the wrist strap and shoe test by using a small screw driver. Drill three holes of 5 mm 0.2 in diameter at marked locations. Make sure the area on the 740 in which the Dual Lock fastening strips are placed is free of dust and dirt. Attach the 3M Dual Lock fastening strips to the rear of the 740 tester to the bottom and top in parallel; see drawing for locations. For securing on the wall, press the 740 firmly against the discs. For removal of the 740, lift the top corners with both hands. VI. Wrist Strap Test Put the wrist band on with ground cord attached and insert the ground cord into the wrist strap plugin jack. Depress the metal contact plate and hold it. One of the indicator LEDs will illuminate. Check to see if the ground resistance is in the cord, the wrist band or in the contact between wrist band and the operator's skin. To check the resistance of the ground cord, leave the plug end of the ground cord attached to the tester and disconnect the snap end from the wrist band. Connect ground cord snap to the stud in the hand symbol or press it onto the contact plate and depress the plate until one of the LEDs is illuminated. Rear of the 740 Template 5 feet 1 500 mm If the green LED illuminates now, the ground cord can be used. Its resistance may be caused by dry skin or the presence of hair in the wrist area.

The use of a skin ton is recommended to solve ts problem.Switch the 740 on. Stand on the 741 shoe electrode.http://fanaf.com/article_ressources/cpr-training-manual-2013.xml

It must be wrist strap test first and then the shoe test. If ts sequence is not strictly kept, the output at the pins described on page 7 will be altered. These digital signals can be used for data recording Example 1 and authorization control equipment such as electrical door opening systems Example 2. The chart on page 7 shows all of the possible test results and the corresponding output levels. Data Output Connector 1 2 pin 1, 2, 4, 5 gh or w pin V pin 6 DCreturn IX.Please note The tester has no adjustable components.You assume all risks and liability associated with such use. Warranty; Limited Remedy; Limited Liability. Ts product will be free from defects in material and manufacture as of the date of purchase. 3M MAKES NO OTHER WARRANTIES INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.
