Please update this article to reflect recent events or newly available information. July 2020 From left to right; Bottom Row D400, D410, D420, D505; Top Row D610, D820, D830. The Latitude competes with the ThinkPad series from Lenovo formerly IBM, the EliteBook series from HP and TravelMate series from Acer. By contrast, the Dell Inspiron is aimed at the consumer market and its specifications change regularly. Whereas Inspiron may change vendors or components several times over the course of a single model, the Latitude line generally retains identical components throughout its production. This design is intended to simplify maintenance and support tasks for large corporations, allowing components to be easily swapped between models. The 3 series has replaced the 5 series as the budget line. The second number in the model As in, 5 4 70 or 7 2 80 indicates the size of the screen on the laptop. For example, they often include security features such as smartcard and contactless smartcard, and TPM security, which are not needed by most consumers. A lid clasp as opposed to a magnetic latching system, DisplayPort video out as opposed to HDMI, and support for legacy standards are all results of the requirements of the business market. Latitude ON is essentially a system within a system. It requires a separate add on module which contains its own microprocessor and Operating system. This allows the laptop to function in the realm of a Netbook. As of February 2017, Latitude computers are available in three series the 3000, 5000, and 7000. The 3000 series is designed to be entrylevel, similar to the previous Latitude E55xx and Latitude E54xx laptops. The 5000 series is midrange, similar to the Latitude E64xx and E65xx. It includes a highperformance subseries whose model designations end in 1.

These devices are available with higherTDP processors, discrete graphics and NVMe SSDs. The 7000 series consists of highend Ultrabook computers, introduced in 2014 with the Latitude E7440 and E7240. The Education series laptops are designed for use in educational institutions. Theyre not especially powerful, and are more geared towards office applications or internetbased applications. The Rugged series laptops are similar to the previous Latitude XFR computers. They are designed with extra durability in mind. Both have support for an optional internal Bluetooth module, a socket for an optional mobile broadband card, and have an external switch for disabling any wireless connections. It had a PATA hard drive and a Dseries modular bay, and used an ATI Radeon 9000 GPU. Unlike later D6x0 series machines, both memory sockets were accessible from a single cover on the bottom of the system. Differences include that the 600M does not work with the Dell DDock, and the case styling is slightly different. The motherboards, screens, and hard drive caddies are all physically interchangeable. The hard drive is accessible through a cover on the lefthand front side of the lower case and is secured by 1 screw. After removing the screw, the hard drive can then slide out. For spacesaving purposes, instead of having both RAM chips on the bottom of the laptop, one RAM slot was moved to the top of the motherboard which could be accessed by removing the keyboard, whereas the other RAM slot remained in the area it had been located at previously. Unlike the D600 and prior midrange Latitudes The 6xx series, dating back to the Cseries you had a choice of standard integrated Intel Graphics GMA 900, or a discrete ATI solution Radeon X300. Symptoms of this problem include a noise or whine when an audio device is connected to the audioout jack. The D620 marked the transition from strictly 32bit processing to openingup the potential to run 64bit operating systems and applications.

<https://maxiotzyv.ru/catalog/inficon-ul1000-fab-helium-leak-detector-manual>

So depending on the installed processor, a D620 can run x8664 64bit software. The D620 used a SocketM for its motherboard and its CPU is possible to be upgraded. It was initially sold with Intel integrated graphics, but an option to upgrade to a discrete Nvidia GPU became available after a few

months. It uses DDR2 memory and is compatible with both PC24200 533 MHz and PC25300 667 MHz memory. It has no option to expand to stereo without using external speakers or headphones. The early models suffered from light bleeding, where a black screen would show light bleeding in from the bottom of the screen. This wasn't fixed until almost a year into production. In addition, some D630 screens are known for having bad LCD pixels. The computer industry at the time had just switched to leadfree solders without redesigning cooling systems. This in turn led to undesirable heating cycles of the more brittle solder causing micro fractures to quickly form. It uses DDR2 memory and is compatible with PC25300 667 MHz, and PC26400 800 MHz memory will work at PC25300 speeds. This was mostly due to temperature fluctuation but the graphics chips also ran much hotter than they were meant to. The D830 series, despite having more room for cooling the chip, suffered from the same issue. As a result, all of the Latitude D630c laptops will eventually fail if used, that is, unless they have already failed previously. However, it is very rare inside the United States due to it not being an option to order on Dells website. You can find some that originated in the United States, but those were special ordered over the phone. They were sold alongside the D630 as standard equipment in select international countries, but while not being that rare internationally, they didn't sell as many units as the D630 series And even D630c series laptops did. As a result, not much information about specific chipsets, graphics chip options If there were any, or any other features can be found online for specifying details.

<https://koeltotaal.com/images/Cpt-Code-Manual-Therapy-Definition.pdf>

The D820 and D830 add an ExpressCard socket, not available in the D6x0 series. The D830 is capable of accepting 8 GB of physical memory with updated firmware. They were for all intents and purposes identical except for the graphics card, certification, and in the case of the M70, the lid. The D400 had a design that was similar to the D610 and came with a ULV Pentium M Banias. The D410 came with a ULV Pentium M Dothan. The D420 came with either an Intel Core Solo U1300 ULV 1.06 GHz, Intel Core Duo U2400 ULV 1.06 GHz or Intel Core Duo U2500 ULV 1.2 GHz. Unlike its bigger D620 brother, the D420s CPU was a soldered in BGA and therefore is not upgradable. The D430 came with either an Intel Core Solo U1400 ULV 1.2 GHz or Intel Core 2 Duo U7600 1.2 GHz; the U7700 Processor 1.33 GHz was later made available as an option. The series was one of the first to offer the UXGA 1600x1200 resolution display and included a Nvidia GeForce MX400 32 MB video accelerator to complement the display requirements. The modular bay could also be used for a second battery identical to the primary battery rather than a special modular bay battery. The Dell C840 can support up to one gigabyte of RAM in each of two slots, for a total of two gigabytes in all. The ATG as well as the XFR have a protective glass glued on top of the screen that often has glue leaking onto the display causing air bubbles to form. In addition, there have been reports that certain other drivers, such as iTunes Helper, may cause this or a similar problem. Other users report no problems from iTunes. A reboot may solve the problem, but often users found that the driver installation is damaged, requiring a reinstallation of the drivers. But the install program will not uninstall if it doesn't recognize the NTrig hardware.

<https://www.ortorehab.se/images/Cpt-Code-Manual-Traction.pdf>

In this case, the alternatives are 1 restore the entire operating system from backup, 2 manually uninstall by erasing all NTrig programs and drivers then editing the registry to remove all references to NTrig, then reinstall the NTrig software, or 3 do a complete reinstall of Windows. In addition, Dell sells a MediaBase with an internal DVD drive. The drive also interfaces by way of a USB connection inside the MediaBase. Most, but not all, users of the MediaBase report that it prevents the drivers from loading. The Latitude 110L is a nearclone of the Inspiron 1000.
