Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Mike Top Contributor Photography 5.0 out of 5 stars I upgraded from the companion 3 series II speakers. I've had the Comp 3s since they came out and they are still being used in my garage. Also I will agree with George that if your computer doesn't recognize the speakers you fix it by unplugging and plugging it back in.

I can't complain about anything with Bose. Everything audio I buy their stuff. I had an old pair of headphones that the ear pads wore out after about 5 yrs. I call in to customer service and was asking how I get replacement pads. They were unbelievable, they sent me brand new headphones and all I had to do was send the old ones back. They could have sent me new pads but replacing the entire headset was above and beyond. Sure people complain about Bose on being overpriced etc. But when you get the quality they offer and them replacing products it's well worth it. Outshines about any 2.1 system I have owned. Remarkable surround simulation. Normally I find Bose a little overpriced for the features, and yes, the input options are limited, that being said, the sound is envelopes you like you just stepped into a listening booth. Speaker placement is very important for the proper surround sound stage. Hope they still make something as good in case these ever fail. The bass is absolutely fantastic, almost too much bass, I have to keep it pretty low on the dial. These are the best computer speakers I've ever heard by far; the other Bose computer speakers, and Logitech's are not even close. The sound quality is superior in every way and looks so damn cool on my desk. Bose, you outdid yourself. Prior to purchasing this Bose speaker system I read all the reviews, some a bit long-winded and managed to decipher the info I needed. This system was a bit more money than I wanted to spend, however it appeared to be the best for the price range. When the system first arrived and I installed it, I immediately realized it was one of the easiest installations in any sophisticated sound system I have installed. I tried a couple of my favorite songs and must admit it did not seem to reflect what the reviews implied sound fills a room with amazing life-like quality.

I came to conclusion sometimes reviews may be a bit figurative and everyone's perception may be a bit different and was simply happy to have new system in play. Later I was streaming ambient music to relax too and was absolutely astonished to hear each sound in crystal clear form. My kitten would dash to the window each time a bird call would emerge from the streaming music and once she even was awakened from her catnap to seek the bird she thought was in immediate vicinity. I am so happy with Bose system and it may be true there are much more expensive units out there that will produce a better sound experience, but for the price the Bose system was well worth every dollar spent. This is by far a remarkable sound system. No issues so far. I have had no issues with any of the components. I had an older version of Bose computer speakers that would pop very loudly when I would change the volume using the dial, but this set has not had that issue at all. Make sure the left and right speakers have an unobstructed placement for best results. Music, movies, and games sound great. These do a good job of making it sound like audio is coming from every direction, especially in games. Be aware that these are USB speakers, and connect to the computer via USB, so they will not use your computer's sound card. If you're OK with that, you can disable the computer sound card like I did. Our current Bose Wavemate, Bose Acoustimass, and multiple sets of headphones were just joined with a new Companion 5 system for our new office and it sounds outstanding with all of the media types that my Mac can toss it. I edit sound with Adobe Audition and Apple Logic and edit movie footage in Adobe Premiere Pro and Apple's Final Cut Studio X and natural sound is mandatory. The Bose C5 system gives me just the right balance and clarity to keep my mix and mastering efforts on the right track.

One more thing that I learned is that you really do need to plug them directly into the system, or into a very hi-powered USB switch or you will see them come and go so far as your system is concerned. My friend owned one of these and I finally got around to owning these speakers for my own computer and man they DO NOT disappoint. If you want to turn your home or office into a concert hall, these speakers are a way to go. Easy to set up, needs a little bit of room if you have multiple speakers but not too much moving. Very well worth the purchase for those of you who can afford it. I'll start off by stating the obvious, if you're looking at any Bose product be ready to spend some serious coin. The sound quality these speakers produce is phenomenal for the size, and almost everybody who's ever heard them has asked me questions about it. If you're planning on having a house party, these won't disappoint. I've had these playing all night with some bass-heavy songs from

Lil Uzi, Kendrick Lamar, Dr. Dre, etc. Zero distortion at nearly any volume level. Ill have more problems with items shaking off my desk before I experience any sound issues at high levels, and I dont think Ive ever had them past 75%. These are also great for other genres with more mids and highs, such as Rock. Listening to Dream On Aerosmith, the vocals sound great and clear, all of the instruments are present and the bass isnt too heavy. I use them with a Macbook Pro, the USB connection is pretty straight forward and quick to use no drivers to install. Ive also hooked up an AUX cord to the Control Pod, that works well too. If there is anything Id complain about these speakers, it would be the lack of bluetooth connectivity. Otherwise this is probably the most solid set of computer speakers on the market, in terms of sound quality, bass, small size and durability. I know people whove purchased these speakers almost 10 years ago, and they still work.

Surprisingly they dont look outdated like youd expect, they just lack some more modern features like bluetooth or USBC. If youre looking for something loud, sleek and thatll last forever, skip all of the other options out there and save up for these. This system will hold its value very well just like an Apple product. Sorry, we failed to record your vote. Please try again The build quality of the system alone is a marvel in a world of designed obsolescence. The sound quality is flawless at low to moderate volumes, although at high volumes you will be slightly disappointed. The system makes you feel like your listening to 5.1 surround. With all of this said, I still think the price is ridiculously high. Sorry, we failed to record your vote. Please try again Sometimes too much for the neighbors I often turn off the bass and it still sounds great. I havent heard a better sound system. The price was also reasonable. Sorry, we failed to record your vote. Please try again I reasoned that if Im replacing a sound system I need top notch sound. The companion 5 is all that and more. I am more often in front of my computer so this where I need quality. They sound good, look good and dont hog my space, Im very happy. Sorry, we failed to record your vote. Please try again I got this for a gaming computer that I set up and had built from the CPU up. I highly recommend these speakers. If you get nervous because there is no mention of Windows 8 like I did in the set up guide, rest assured, they are supported and sound FANTASTIC. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again They are expensive than others but they are worthy for the price. Bose is my only choice for music system. Sorry, we failed to record your vote. Please try again Size was exact and condition was excellent. Sounds beautiful. Sorry, we failed to record your vote. Please try again Very good buy. Very happy!!! Sorry, we failed to record your vote.

Click here for more information on the types of cookies we use and how to change your cookie settings. The two small, elegant desktop speakers are elevated on stands for optimum performance and extra usable desk space. Hookup requires only a single connection from the computer speaker system to your PC or laptop — no special software or hardware upgrade needed. An all-in-one control pod keeps volume control, single touch mute, headphone jack and auxiliary input within easy reach. To save energy, the system goes into sleep mode after 30 minutes of inactivity and wakes up when an audio signal is received or the control pod is tapped. Sounds great too. If you turn it on and the green light is on the pad, it will turn itself off if its not used in a while which isnt an issue. The light will go red when its off, just tap the pad and it comes straight back on and the light goes green. This only happens if not being used, so it wont cutout while youre watching a film or listening to music. The speakers are still going strong, extremely high quality audio and Bass is heavy, great for work and music alike. Cannot recommend these speakers enough. The controller is perfect for light touch mute and volume disc is perfect for easy adjustment, use both input on controller to connect my smartphone for music and sometimes headphones for pc. Bose are no1 in my opinion for speakers and headphones, no other brand seems to deliver the high quality in construction as well as sound quality. One connection from the system to your computer is all you need to experience spacious, immersive sound. The system automatically wakes up when an audio signal is received or the control pod is tapped. Click here for more

Wolfram. 5.0 out of 5 stars I discovered it was so much more than that, all these years later the unit and the remote work just had they did on the very first use.

I also have some AE2 headphones which I'm pleased to say perform faultlessly, on the strength of these two products I purchased the Companion multimedia speakers, they were quickly connected to my PC without any problems and yes the sound reproduction is as I would have expected. excellent. They look very good either side of my all in one PC. Can't really find a fault, other reviewers have remarked a LED on/off indicator would be a worthwhile addition, I prefer not to have too many illuminations whilst working on the PC and listening to my music, so for me the lack of an operation light suits me fine. I would recommend these speakers, and hope that in many years they perform as well as they do now. Thanks for reading. So when my previous speakers suddenly and inexplicably died I thought I'd splash the cash and buy a pair of Bose speakers. I waited to be impressed. They are no better than the Creative Sounds I had before, in fact a little less capable if I'm honest. Most annoyingly, there's no light to indicate that the rotary knob on the front has been turned or left on. Overall, sadly overpriced and underdelivering. With the matte black finish it pairs perfectly with high-end office peripherals e.g., like your all too expensive monitors. Versus the competition, it's a plus not as hipster as Gigaworks or out of place like Logitech Z600. Sound now this is probably what most people care about. Let me cut straight into it it's not as good as I expected. Coming from a Bose Companion 2 Series II like some other reviewers here, the sound appears a bit muffled and unclear upon first plugging into my computer. I can only hope that this will improve over time as they go through the break-in period. That is something different but these speakers really do deliver in sound if you want to listen to Music on your PC. I always think you get what you pay for and I love these speakers. I will definitely get my money worth from them. I was so pleased with the sound.

Then I went away for a couple of weeks. When I came home I turned them on nothing, not a sound, silence. My son came to look in case I was doing something wrong. No, I wasn't. He went and bought me a new power pack. He plugged it in and the light came on. It didn't stay on. As soon as I turned the speakers on the light went off. These speakers I was so chuffed with had blown two power packs. I would have sent them back but when I moved house before Christmas I had thrown all my packaging away. No box to return them. I have bought myself a very cheap set of speakers just to see if there is any other reason for my Bose speakers not to work. No, these work fine. The sound is not anywhere near as good, but they work. Really disappointed. I won't say don't buy these, but please keep the packaging! My Cambridge Soundworks system is more than 15 years old and starting to show its age though still sounds great. This Bose Companion 2 Series III Multimedia Speaker System looked good, both from a price point and value for money. Easy to set up and simple to use, it was ready to go within half an hour and back in its box before the clock struck one. It sounds boxy, lacks true bass, is flimsy and occupies more desk space than it can justify. There are

better speaker systems off the shelf at Home Bargains and at a fraction of the price. Oh Bose whatever happened to your reputation. Really discernable difference in sound quality, its fabulous. I would prefer a longer speaker to speaker cable at 1.8 mtrs factory given length, It is not a long as I would like for a tidy installation going round my desk corner, I daresay I could order a longer one if I wanted but to give a 2.5 or three metre cable would be fab. Overall I am very very happy, its the sound quality which is what the product is all about. Right Now, I would definitely buy again. I looked at the more expensive speakers but more than double the price, whether its double the sound quality is debatable.

Happy Days listing while working! Basse und Hohen ausgewogen. Ein kleines Horerlebnis. Wen da leider nicht ein kleiner aber ggf. Statt einer gangigen Steckverbindung hat man hier einen besonderen Steckertyp verwendet, Den ich sonst nirgendwo finden konnte. Somit ist eine Verlangerung, mittels Verlangerungskabel nicht moglich. Es sei denn, man schneidet das Kabel auf und lotet was dazwischen. Dieses ist aber nicht jedermanns Sache und solte auch nicht der Sinn sein, Verlust des Garantieanspruchs inkl. Schade um die sonst sehr guten und uberzeugenden Lautsprecher. Sorry, we failed to record your vote. Please try again Il palcoscenico e riprodotto con discreta accuratezza ovviamente contando una disposizione che le prevede accanto ai lati del monitor, allargandole si avrebbe ancor piu spazialita, la chiarezza del suono e veramente ottima anche a volumi molto elevati; si vede laccurata calibrazione di un giusto limite massimo del volume per conservare la precisione di riproduzione. Casse che si prestano ad un piacevole ascolto di musica purché la sorgente sia un pc con una scheda audio integrata dignitosa, meglio se dedicata per recuperare piu dinamica e alti e bassi piu presenti. Se hai trovato la recensione utile, clicca sul tasto. Grazie per la lettura Sorry, we failed to record your vote. Please try again Nach dem ersten Test an einem Flachbildfernsehr traute ich meinen Ohren nicht, zu Hause habe ich sie dann mit einem MP3Player getestet. Die Boxen haben eher die Tonqualitat eines SpielzeugRadios, deshalb habe ich sie gleich wieder zuruckgeschickt. Sorry, we failed to record your vote. Please try again Non sono grosse, non c'e il problema dell'amplificatore, basta collegarle alla corrente e hanno una discreta potenza nulle di elevato ovviamente. Come al solito, i bassi vengono esagerati nei dispositivi moderni e qui infatti sono mooolto presenti. Sono puliti, ma eccessivi per chi ha un po di educazione sonora. Le ho dovute equalizzare per diminuirli un po eq di win10.
